BRACHIOSAURUS

ANSWER SHEET

1. The Brachiosaurus lived around 154 million years ago in the Jurassic period.
2. The Brachiosaurus had longer front legs than back legs, causing its body to slope upwards towards its neck.
3. The Brachiosaurus could grow to be 85 feet long and 40 feet tall.
4. The Brachiosaurus was a herbivore and ate plants like ferns, conifers, and tall trees.
5. Its long neck allowed it to reach high up into the top of trees where most other dinosaurs couldn't reach.
6. The Brachiosaurus lived in what is now North America, which was full of forests, rivers, and marshes.
7. The Brachiosaurus likely went extinct due to changing climate, new predators, and changes in vegetation during the late Jurassic period.
8. The Brachiosaurus's neck was 30 feet long.
9. The name "Brachiosaurus" comes from the Greek words "brachion" (arm) and "sauros" (lizard), referring to its long front legs that looked like arms.
10. Brachiosaurus babies were much smaller than adults and likely grew very quickly as they ate a lot of food.
